

Jobrator E2E — Failed & Skipped Scenarios

Playwright + Cucumber BDD · full regression suite

Run date **Wednesday, 29 July 2026 at 03:13** Environment **https://jobrator.com** Browser **Chromium** Scenarios **335**
Source **full regression run, 2026-07-27**

Data provenance

Figures are from the full regression run of 2026-07-27 (335 scenarios, 19m15s). That run's cucumber JSON was later overwritten by single-scenario debug runs, so the dataset behind this report was reconstructed from the run's own recorded console output; totals reconstruct exactly to cucumber's summary line (313 passed / 20 failed / 2 skipped), both by verdict and by step status. A confirmatory re-run on 2026-07-28 could not be used: the jobrator.com environment became unreachable mid-run (TCP 443 refused on both jobrator.com and api.jobrator.com), producing 317 timeout-driven failures that reflect the outage, not the product.

1. Executive summary

What the meeting needs to decide

- **20** scenarios failed, all now triaged. **14** trace to a filed defect; **6** are test bugs or flake rather than product defects — see §3.
- **Three new defects filed from this run: BUG-013, BUG-014, BUG-015.** Two are P1 — VNIN verification is non-functional in production, and the verification provider's admin credentials are exposed in client-side code.
- **2** scenarios were skipped by the framework and reached *no verdict at all*. A skip is not a pass: these represent untested coverage — see §4.
- Skips currently labelled "environmental" in the step definitions have been re-investigated; at least one is a genuine production defect being masked. See §5.

2. Where the problems cluster

FEATURE AREA	FAILED	SKIPPED	TOTAL OPEN
dashboard / Upload Candidate CV	4		4
candidate / Candidate Saved Jobs and Job Alerts	3		3
dashboard / Generate CV with AI	3		3
employer / Employer Shortlisted CVs and Scheduled Interviews	2		2
candidate / Candidate VNIN Verification		2	2
admin / Admin Assessment Management — Psychometric and Skill Tests	1		1
admin / Admin Company and Candidate Management	1		1
admin / Admin Job Post Management	1		1
auth / Candidate Registration	1		1
auth / Employer Registration	1		1
candidate / Candidate My Profile	1		1
employer / Employer All Applicants	1		1
employer / Employer Messages	1		1

3. Failed scenarios (20)

All 20 have been investigated against the live site. **14** map to a filed defect in the bugs/ log and are expected to stay red until dev fixes them. The remaining **6** were triaged and found **not** to be product defects — two are test bugs, four are flake that passed on a sequential re-run.

3.1 Triaged — not product defects (6)

TEST ID	SCENARIO & FAILURE	DEFECT	TIME
TC_ACC006	TC_ACC006 — Admin can create a new candidate record from the admin console Admin Company and Candidate Management · features/admin/admin_company_candidate_management.feature:70 Failed at: Then the new candidate record should appear in the candidates list Error: expect(received).toBeGreaterThan(expected) Expected: > 0 Received: 0 FLAKY — passed on sequential re-run; no product defect identified.	triaged not a bug	26.6s
TC_AJP002	TC_AJP002 — Admin can create a new job post from the admin console Admin Job Post Management · features/admin/admin_job_posts.feature:23 Failed at: Then the new job post should appear in the admin job posts list Error: expect(received).toBeGreaterThan(expected) Expected: > 0 Received: 0 FLAKY — passed on sequential re-run; no product defect identified.	triaged not a bug	30.6s
TC_REG005	TC_REG005 - Registration fails when all required fields are left empty Candidate Registration · features/auth/candidate_registration.feature:41 Failed at: When the user submits the registration form without filling any fields locator.click: Timeout 30000ms exceeded. Call log: - waiting for locator('button[type="submit"][form="candidateRegister"]').filter({ visible: true }).first() - locator resolved to <button disabled type="submit" form="candidateRegister" class="theme-btn btn-style-one d-flex gap-3 mb-0 cursor-disabled">Register</button> - attempting click action 2 × waiting for element to be visible, enabled and stable - element is not enabled - retrying click action - waiting 20ms 2 × waiting for element to be visible, enabled and stable - element is not enabled - retrying click action - waiting 100ms 56 × waiting for element to be visible, enabled and stable - element is not enabled - retrying click action -... FLAKY — passed on sequential re-run; no product defect identified.	triaged not a bug	30.6s
TC_EREG012	TC_EREG012 - Email field rejects SQL injection payload Employer Registration · features/auth/employer_registration.feature:84 Failed at: And the user overrides the employer email with an invalid value "' OR '1'='1" locator.fill: Timeout 30000ms exceeded. Call log: - waiting for locator('input[name="companyEmail"]').filter({ visible: true }).first() FLAKY — passed on sequential re-run; no product defect identified.	triaged not a bug	30.7s
TC_CP004	TC_CP004 — Skills multi-select allows searching and adding skills as tags Candidate My Profile · features/candidate/candidate_profile.feature:37 Failed at: And the candidate selects a skill from the dropdown suggestions locator.waitFor: Timeout 30000ms exceeded. Call log: - waiting for locator('.select__option:has-text("JavaScript"), [class*="select__option"]:has-text("JavaScript"), .select2-results__option:has-text("JavaScript"), .dropdown-item:has-text("JavaScript"), [role="option"]:has-text("JavaScript"), .multiselect__option:has-text("JavaScript"))).filter({ visible: true }).first() to be visible NOT A DEFECT — test-data dependency. The shared candidate already has Java, C#, PHP and JavaScript selected; react-select hides already-selected options, so searching "JavaScript" correctly returns "No options". Fix: have the test pick a skill not already on the profile.	triaged not a bug	34.3s

TEST ID	SCENARIO & FAILURE	DEFECT	TIME
TC_EMMSG003	TC_EMMSG003 — Empty state is shown when the employer has no message threads Employer Messages · features/employer/employer_messages.feature:32 Failed at: Then an appropriate empty state message should be displayed on the messages page Error: expect(received).toBeTruthy() Received: false NOT A DEFECT — unsatisfiable precondition. "the employer account has no message threads" only warns when threads exist and proceeds anyway; the seeded employer has threads, so the empty state legitimately cannot render. Fix: use a thread-free account or drop the scenario.	triaged not a bug	4.7s

3.2 Re-confirming a known defect (14)

TEST ID	SCENARIO & FAILURE	DEFECT	TIME
TC_AT003	TC_AT003 — Admin can edit an existing psychometric exam and persist changes Admin Assessment Management — Psychometric and Skill Tests · features/admin/admin_assessments.feature:34 Failed at: Given at least one psychometric exam exists on the platform Error: expect(received).toBeGreaterThan(expected) Expected: > 0 Received: 0	BUG-002	7.4s
TC_SJ004	TC_SJ004 — Candidate can create a new job alert with keyword and location Candidate Saved Jobs and Job Alerts · features/candidate/saved_jobs_and_alerts.feature:49 Failed at: When the candidate enters "QA Engineer" as the alert keyword Error: expect(received).toBeTruthy() Received: false	BUG-009	2.9s
TC_SJ005	TC_SJ005 — Job alert creation fails when required fields are empty Candidate Saved Jobs and Job Alerts · features/candidate/saved_jobs_and_alerts.feature:57 Failed at: When the candidate submits the job alert form without filling any fields Error: expect(received).toBeTruthy() Received: false	BUG-009	2.9s
TC_SJ006	TC_SJ006 — Candidate can delete an existing job alert Candidate Saved Jobs and Job Alerts · features/candidate/saved_jobs_and_alerts.feature:62 Failed at: When the candidate clicks the delete button on a job alert Error: expect(received).toBeTruthy() Received: false	BUG-009	3.1s
TC070	TC070 — Subscribed candidate generates an experience description via AI Generate CV with AI · features/dashboard/generate_cv_with_ai.feature:90 Failed at: And the candidate enters experience points "Built REST APIs, led team of 5 devs, improved performance by 40%" and clicks Generate Error: expect(received).toBeFalsy() Received: true	BUG-015	15.1s
TC071	TC071 — Subscribed candidate uses Write via AI to generate the about section Generate CV with AI · features/dashboard/generate_cv_with_ai.feature:98 Failed at: And the candidate enters experience points "Built REST APIs and microservices" and clicks Generate Error: expect(received).toBeFalsy() Received: true	BUG-015	14.9s
TC072	TC072 — Subscribed candidate creates a complete AI-assisted CV Generate CV with AI · features/dashboard/generate_cv_with_ai.feature:107 Failed at: And the candidate enters experience points "Led engineering team, delivered 3 major product launches" and clicks Generate Error: expect(received).toBeFalsy() Received: true	BUG-015	14.5s
TC056	TC056 — Share uploaded CV via LinkedIn from CV manager Upload Candidate CV · features/dashboard/upload_candidate_cv.feature:61 Failed at: And the candidate clicks the LinkedIn share icon Error: expect(received).toBeTruthy() Received: false	BUG-007	9.6s
TC058	TC058 — Download uploaded CV in PDF format Upload Candidate CV · features/dashboard/upload_candidate_cv.feature:76 Failed at: Then the CV should be downloaded as a PDF file Error: expect(received).toBeTruthy() Received: false	BUG-008	3.4s

TEST ID	SCENARIO & FAILURE	DEFECT	TIME
TC057	TC057 — Only LinkedIn is available as a CV sharing option Upload Candidate CV · features/dashboard/upload_candidate_cv.feature:69 Failed at: Then only the LinkedIn social media icon should be visible in the share section Error: expect(received).toBeTruthy() Received: false	BUG-003, BUG-007	8.0s
TC059	TC059 — Download uploaded CV in DOC format Upload Candidate CV · features/dashboard/upload_candidate_cv.feature:86 Failed at: Then the CV should be downloaded as a DOC file Error: expect(received).toBeTruthy() Received: false	BUG-008	3.4s
TC_AA001	TC_AA001 — All Applicants page lists applications across all employer job posts Employer All Applicants · features/employer/all_applicants.feature:14 Failed at: And each application entry should display the job title Error: expect(received).toBeTruthy() Received: false	BUG-006	2.7s
TC_SI001	TC_SI001 — Shortlisted CVs page lists all shortlisted candidates with required details Employer Shortlisted CVs and Scheduled Interviews · features/employer/shortlisted_cvs_and_interviews.feature:21 Failed at: And each shortlisted entry should display the applied job title Error: expect(received).toBeTruthy() Received: false	BUG-006	2.5s
TC_SI002	TC_SI002 — Employer can initiate interview scheduling from the Shortlisted CVs page Employer Shortlisted CVs and Scheduled Interviews · features/employer/shortlisted_cvs_and_interviews.feature:29 Failed at: And the form should contain an attendee email field Error: expect(received).toBeTruthy() Received: false	BUG-005	3.5s

4. Skipped scenarios (2)

Every skip below is deliberate — a step definition returned 'skipped', which aborts the scenario and marks all remaining steps skipped. None were skipped by tag or by the runner.

TEST ID	SCENARIO, SKIP POINT & REASON	BLOCKED BY
TC_VN002	TC_VN002 — Verification succeeds when valid VNIN credentials are submitted Candidate VNIN Verification · features/candidate/vnin_verification.feature:22 Skipped at: Then the verification should succeed Step returns "skipped" when no success banner appears. The stated reason is "needs a real NIMC-registered VNIN". Network capture disproves this: submitting the form fires exactly one request — POST payarenaverification.com/api/account/token — which returns auth_token: null, so the VNIN is never sent to the provider at all. The failure is identical for any VNIN, valid or not. MISCLASSIFIED — REAL PRODUCT DEFECT, NOT ENVIRONMENTAL	BUG-013 (VNIN integration returns null auth token)
TC_VN005	TC_VN005 — Verified badge is displayed on the dashboard after successful VNIN verification Candidate VNIN Verification · features/candidate/vnin_verification.feature:40 Skipped at: Given the candidate has successfully completed VNIN verification Precondition step returns "skipped" when no Verified badge is present. The account can never become verified because the verification flow itself is broken, so this precondition is permanently unsatisfiable. MISCLASSIFIED — BLOCKED BY PRODUCT DEFECT	BUG-013 (blocked downstream of TC_VN002)

5. Investigation: the VNIN skips are masking a production defect

TC_VN002 / TC_VN005 — reclassify from "environmental" to P1 defect

Both scenarios skip with the justification that they need a *real, NIMC-registered VNIN*, implying an unavoidable test-data gap. Live network capture of the submit disproves that.

Clicking **Verify** produces exactly one network request:

```
POST https://payarenaverification.com/api/account/token
→ 200 {"success":true,"description":"Successful",
      "data":{"auth_token":null,"access_tokenexpire":"..."}}
```

UI result: "Failed – VNIN Verification failed"

- The VNIN number is **never transmitted** — no lookup request is ever made.
- The flow dies at token acquisition because the provider returns `auth_token: null` alongside `success: true`.
- Therefore a genuine registered VNIN would fail *identically*. VNIN verification is broken for **every user in production**.
- TC_VN005 is collateral: its precondition can never be met while TC_VN002 cannot pass.

Two further issues found during the same investigation

- **Credential exposure (security)**. The token request ships the verification provider's admin username and password in plaintext from the browser, readable by any visitor via devtools. This is independently reportable, and plausibly explains the null token if those credentials were rotated after leaking.
- **TC_VN003 is a false green**. It asserts "invalid VNIN → error message" and passes — but the error it observes comes from the broken integration, not from VNIN validation. It would pass with a valid VNIN too, so it currently proves nothing.

Test-side defects in TC_VN005 itself

- Its final Then logs a warning and asserts nothing — the scenario could never fail even with the precondition met.
- The precondition checks for the badge on the VNIN page, before the when navigates to the dashboard where the badge would appear.
- The selector `*:has-text("Verified")` matches ancestors up to `<html>`, so it can false-positive on any page containing that word.

TC070 / TC071 / TC072 — AI CV generation (BUG-015)

The AI endpoint proxies to **Google Gemini 2.5 Flash**. When the model replies **503 Service Unavailable**, Jobrator neither retries nor degrades — it returns 500 and the UI shows a dead-end **"Error writing via AI"** modal that discards the user's typed input.

```
POST https://api.jobrator.com/api/account/ai/generate
→ 500 {"message":"Failed to generate text",
      "error":["GoogleGenerativeAI Error]: ... gemini-2.5-flash:generateContent:
      [503 Service Unavailable] This model is currently experiencing high demand.
      Spikes in demand are usually temporary. Please try again later."}]
```

- **Intermittent, roughly 1 attempt in 3**. A three-attempt probe gave 500 / 200 / 200; a sequential re-run of the three scenarios gave 2 failed / 1 passed. The endpoint is wired correctly — the defect is purely the unhandled upstream 503.
- This is a **paid, subscription-gated feature** failing for a third of attempts, with no retry button and no preservation of what the user typed.
- **Secondary**: the 500 body forwards Gemini's raw error verbatim, disclosing the model, provider and upstream URL to the client.

6. Recommended actions

#	ACTION	OWNER	PRIORITY
1	Rotate the admin@jobrator.com provider credentials now (BUG-014) and treat them as compromised — they have been publicly readable for as long as the code has been deployed. Then move the token exchange server-side.	Security	P1
2	Fix BUG-013 — VNIN verification returns <code>auth_token: null</code> ; the feature is non-functional for every user. May be resolved by the BUG-014 rotation.	Backend	P1
3	Fix BUG-015 — add bounded retry with backoff around the Gemini call, stop forwarding the provider error body, and keep the user's input on failure.	Backend	High
4	Convert TC_VN002's return 'skipped' into a hard assertion so BUG-013 shows as a failure, not a silent skip. Fix TC_VN005's vacuous Then and selector; retarget TC_VN003 so it stops passing for the wrong reason.	QA	P2
5	Fix the two test bugs — TC_CP004 (pick an unselected skill) and TC_EMMSG003 (thread-free account, or drop the scenario).	QA	P2

#	ACTION	OWNER	PRIORITY
6	Investigate the four flaky scenarios under parallelism (TC_EREG012, TC_ACC006, TC_AJP002, TC_REG005) — all passed sequentially, so the suite's parallel: 2 setting is the likely factor.	QA	P3
7	Adopt the standing rule: a skip requires a linked bug ID or a documented data dependency. "Environmental" without evidence is not acceptable.	QA	Process

Appendix A — Open defect log (bugs/)

ID	TITLE	TESTS RE-CONFIRMING IT
BUG-001	Password reset email delivery is intermittent / exceeds 180 s	—
BUG-002	Admin Psychometric Test environment has no exams (empty data set)	TC_AT003
BUG-003	`GET /api/account/candidate` returns 500 (dashboard profile fails to load)	TC057
BUG-004	Applying without selecting a CV returns HTTP 500 and a misleading "You can apply to a job Only Once!" error	—
BUG-005	Interview scheduling modal has no interview format/type field	TC_SI002
BUG-006	Shortlisted CVs entry does not show the job the candidate applied to	TC_AA001, TC_SI001
BUG-007	CV manager has no LinkedIn (or any) share control	TC056, TC057
BUG-008	CV download returns a 404 JSON error body instead of the uploaded document	TC058, TC059
BUG-009	"Job Alerts" is a read-only notification feed: no keyword alert creation and no delete	TC_SJ004, TC_SJ005, TC_SJ006
BUG-010	Employment Type does not offer "Internship"	—
BUG-011	Job detail apply control: stale `/subscription` href, and a malformed applied-jobs pagination request	—
BUG-012	Setting "Job Status" to Draft on the Edit Job form is silently ignored (no way to deactivate a job)	—
BUG-013	VNIN verification is broken for all users: provider returns a null auth token	—
BUG-014	Verification provider's admin credentials are exposed in client-side code	—
BUG-015	AI CV generation fails intermittently: upstream Gemini 503 is surfaced as a dead-end error	TC070, TC071, TC072
